

LIBRA LURES®

LIBRA LURES CATALOG 2025

The Libra Lures brand was brought to life by three "founding fathers," each of whom contributed their unique skills, resulting in a highly effective and dynamic team.

Adam Chmielowski – CEO of the company, responsible for project organization, finances, and production technology. Thanks to his hard work, numerous trials, and tests, we are able to deliver lures made from such an incredible material – floating, soft, behaving naturally in water, and resistant to aggressive predator attacks.

Mateusz Okoń – the creator of the project, responsible for brand design, marketing, sales, and the creation of innovative products, as well as their introduction into serial production. A long-time participant in the Polish GPX in spinning discipline and a representative of Poland in World Championship competitions. Currently a member of the national team for shore trout fishing.

Tomasz Podkul – the main designer of our brand's products, creating new models with a pencil in hand, collaborating with 3D design specialists, and possessing extensive experience in production technologies. Winner of the 2022 Polish Championship and the 2019 World Championship in shore trout fishing – France. Currently a member of the national team for shore trout fishing.

Our portfolio, though constantly evolving, is already impressive. At the moment, we proudly present 4 main series of lures. These are:

• **TROUT SERIES**

Our flagship series, where the story of Libra Lures began. It includes 14 models produced in 20 incredibly effective colors, several sizes, and aromatic variants – cheese, krill, garlic, and no scent. You'll find imitations of larvae, pupae, and other invertebrates, such as annelids. These lures range in size from 18mm to 95mm.

• **BASS SERIES**

This series features 4 models, produced in sizes ranging from 128mm to 148mm, made from a new, special material blend called "Salt Worm Project." The material is very soft, ensuring perfect lure action, and has been enriched with an attractive, fish-attracting addition of salt. Combined with the krill scent, it creates an excellent combination not only for bass but also for perch, zander, and pike.

• **PREDATOR SERIES**

As the name suggests, this is our answer to the needs of predator anglers. It includes three models: Kraken Shad, Embriion Shad, and Embriion Twist Tail. We designed them specifically for pike, perch, zander, and catfish anglers, but initial tests have shown that other predators also find them irresistible. The series boasts a great, fish-catching color palette and a wide size range: 45mm to 205mm.

• **PELAGIC/VERTICAL SERIES**

Years of gathering experience and perfecting methods for catching fish feeding in the water column – whether directly below the boat or by casting to target predators. In this series, we offer four incredibly effective models: Gobio, Dead Fish, Frog, and Slug Tail, which will allow you to perfectly adapt to the behavior of zander and pike on the water.

We present to you our pride – a catalog full of products born from genuine, sincere passion, created through our pursuit of perfection and desire to break the mold. It is a collection of lures into which we have poured our hearts, filled with love for fishing and being in nature.

We invite you to explore our offerings,

The Libra Lures Team

TROUT SERIES

The Trout Series is our original and flagship series. It was with this series that the adventure of the Libra Lures brand began. In this series, we include all our competitive experience and knowledge in trout fishing, gained on many domestic and foreign fishing grounds. We focused on faithful imitations of larvae, pupae, and worms, which are an important part of the fish's diet. These baits quickly won the hearts of anglers, making a breakthrough in the market. It turned out that they perform excellently not only when fishing for trout but also for perch, chub, ide, and other seemingly non-predatory fish. Thanks to the use of a unique, extremely soft mixture from which we produce our lures, we achieved great results. The baits look and behave like real food, which results in great interest from fish. The buoyancy of the mixture used allows for a maximally natural presentation and the use of relatively larger weights without losing the quality of the action, which allows for fishing in deeper places, stronger currents, or reaching distant fish spots. Importantly, our baits do not discolor each other, so we can store them in any color configuration. The lures in the "Trout Series" line also affect the sense of smell of our prey. The intense, faithful aroma is a huge asset on waters subjected to strong fishing pressure, as well as on "trout area" type waters. In our offer, you will find baits flavored with garlic, krill, cheese, as well as unscented versions. Currently, in our flagship series, which we are constantly developing, you will find as many as 14 different models, of which 10 are available in more than one size version. Moreover, each lure is offered in as many as 20 color variants, from natural and subdued to aggressive and fancy colors. The "Trout Series" is our great pride and joy! Check it out and see for yourself why!

TROUT SERIES

FATTY D'WORM TOURNAMENT

FATTY D'WORM TOURNAMENT – the "competitive" version of our flagship imitation of a dew worm. It is slightly smaller (55 mm) and slimmer than the larger original. This way, we avoid empty bites, which are costly during point-based fishing competitions, where every fish can decide our success or failure. For rigging, we recommend classic fly hooks in sizes #4 – 6. The size of the tungsten head and its weight, as with larger worms, will depend on the fishing situation and the chosen presentation style. One thing is certain – FATTY D WORM TOURNAMENT will work perfectly in every situation. Try it, and you will see for yourself that there is probably no easier bait to handle in our portfolio. That's why we recommend it not only for competitive fishing but also for those who are just taking their first steps in trout fishing.

TUNGSTEN BEAD ON FLY HOOK

- **Fatty D'Worm Tournament 55** - slotted tungsten bead in size 3,5 - 7,0mm, hook size #6 streamer or #4 - 6 jig.

CLASSICAL JIG HEAD

- **Fatty D'Worm Tournament 55** - jig head hook #4 - 6, weight 1,0 - 8g.

JIG HEAD - OFFSET HOOK

- **Fatty D'Worm Tournament 55** - jig head offset hook #4 - 6, weight 1,0 - 8g.

CHEBURASHKA - STRAIGHT HOOK / CLASSIC

- **Fatty D'Worm Tournament 55** - straight hook with large eye in size #4 - 6, cheburashka weight 1,0 - 10g.

CHEBURASHKA - OFFSET HOOK

- **Fatty D'Worm Tournament 55** - offset hook with large eye in size #4 - 6, cheburashka weight 1,0 - 10g.

JIG RIG - STRAIGHT HOOK / CLASSIC

- **Fatty D'Worm Tournament 55** - straight hook with large eye in size #4 - 6, weight 1,0 - 10g.

JIG RIG - OFFSET HOOK

- **Fatty D'Worm Tournament 55** - offset hook with large eye in size #4 - 6, weight 1,0 - 10g.

CAROLINA RIG

- **Fatty D'Worm Tournament 55** - offset hook with large eye in size #4 - 6, bullet weight 3,0 - 15g.

TEXAS RIG

- **Fatty D'Worm Tournament 55** - offset hook with large eye in size #4 - 6, bullet weight 3,0 - 15g.

**hook sizes may vary considerably between different brands.*

FISH

brown trout, rainbow trout, chub, zander, perch, zander, perch.

TACKLE

an essential element of a properly composed set will be an adequately performing rod, 185-220cm / 1-6g in length, which will not only properly absorb the fish's runs during the fight but will also have the necessary backbone when you hook the fish and help you properly retrieve the lure and feel the often very gentle bites. For such rods a reel in 2000-3000 size with a precise drag is recommended. Braided line of size +0.2-0.4PE - 0.06-0.08mm or 0.12-0.16mm diameter monofilament of high quality. With such a set we can easily catch most species of fish. When fishing for larger fish, the set needs to be modified and adjusted to the specific conditions.

FISHERIES

rivers, lakes, ponds, artificial water reservoirs, canals.

SCENT

Cheese - works perfectly in standing waters such as commercial ponds Trout Area and medium-sized rivers when fishing for whitefish.

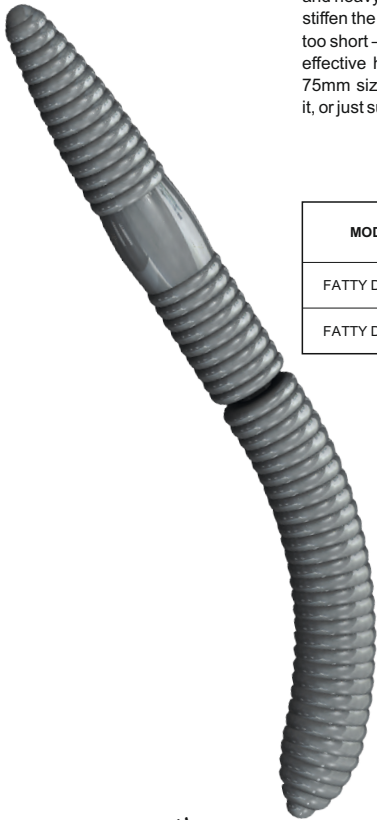

Krill - recommended mainly for fishing for wild fish in large rivers and for predators such as perch, zander in dam reservoirs, lakes.

Garlic - used mainly when fishing for fish with a calm feeding behavior, so-called whitefish, and rainbow trout in commercial ponds.

Unscented - for those with a sensitive sense of smell.

FATTY D'WORM

FATTY D'WORM – a faithful imitation of a thick, fatty, and tasty dew worm. Interestingly, despite the impression of an impressive size, our "worm" is sucked in by fish of all ages. The biggest advantage of FATTY D'WORM is that it works great both under very light and heavy weights. In its case, it is crucial not to use hooks that are too long, as they will stiffen the body and dampen the action of our worm. Don't worry that the hook will seem too short – fish attack the bait "from the head," so there are absolutely no problems with effective hook setting. Fishing and presenting FATTY D'WORM, both in 65mm and 75mm sizes, is extremely simple. You can freely float it, roll it on the bottom, twitch it, or just subtly animate it – our worm always works flawlessly and is devilishly tempting.

SCENT

Cheese – works perfectly in standing waters such as commercial ponds Trout Area and medium-sized rivers when fishing for whitefish.

Krill – recommended mainly for fishing for wild fish in large rivers and for predators such as perch, zander in dam reservoirs, lakes.

Garlic – used mainly when fishing for fish with a calm feeding behavior, so-called whitefish, and rainbow trout in commercial ponds.

Unscented - for those with a sensitive sense of smell.

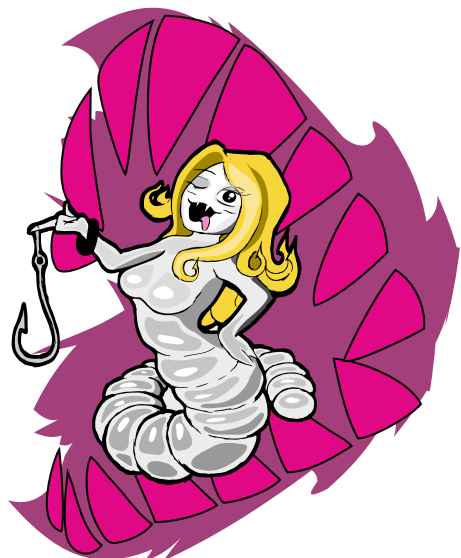

LARVA

LARVA – can be considered our most versatile lure. In our offer, you'll find three size variants: 30mm, 35mm, and 45mm. Just like with our other lures, the key to success with our flagship insect larva imitation is its natural presentation. We must remember not to overload the LARVA and allow it to behave as naturally as possible. A free-falling drift, preferably near the bottom, should remain as undisturbed as possible by unnecessary line adjustments, jerking, etc. The LARVA only needs minimal animation in the form of slight twitches of the rod tip. It works exceptionally well when targeting the most skittish fish, such as brook trout or chub.

MODEL	LENGTH (mm)	WEIGH (g/pcs)	QUANTITY PER PACKAGE (pcs)	SCENT

FISH

brown trout, rainbow trout, barbel, chub, ide, grayling and whitefish.

TACKLE

an essential element of a properly composed set will be an adequately performing rod, 185-220cm / 1-6g in length, which will not only properly absorb the fish's runs during the fight but will also have the necessary backbone when you hook the fish and help you properly retrieve the lure and feel the often very gentle bites. For such rods a reel in 2000-3000 size with a precise drag is recommended. Braided line of size +0,2-0,5PE - 0,04-0,08 mm or 0,10-0,16 mm diameter monofilament of high quality. With such a set we can easily catch most species of fish. When fishing for larger fish, the set needs to be modified and adjusted to the specific conditions.

FISHERIES

rivers, lakes, ponds, artificial reservoirs water, canals.

SCENT

Cheese - works perfectly in standing waters such as commercial ponds Trout Area and medium-sized rivers when fishing for whitefish.

Krill - recommended mainly for fishing for wild fish in large rivers and for predators such as perch, zander in dam reservoirs, lakes.

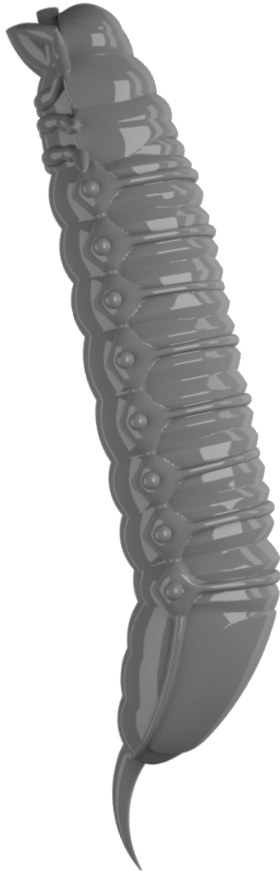

Garlic - used mainly when fishing for fish with a calm feeding behavior, so-called whitefish, and rainbow trout in commercial ponds.

Unscented - for those with a sensitive sense of smell.

GOLIATH

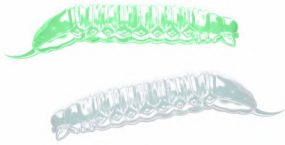

GOLIATH – With this project, we devoted the most attention to details and the geometry of the lure to ensure it performs correctly and provokes fish to strike during retrieval. The model was designed with cautious, previously caught fish in mind, ensuring they won't swim past it indifferently. The legs, shell, eyes, and even the spine significantly enhance Goliath's effectiveness. This is particularly important on commercial waters, where fish are very cautious due to fishing pressure.

- **Goliath 35** - offset hook with large eye in size #6 - 4, weight 1 - 10g.
- **Goliath 45** - offset hook with large eye in size #4 - 2, weight 1 - 15g.

**hook sizes may vary considerably between different brands.*

FISH

brook trout, rainbow trout, chub, zander, perch.

TACKLE

An essential element of a well-matched set is a properly functioning rod with a length of 185-220cm / 1-6g, which not only provides good shock absorption during the fight but also has the right speed when setting the hook and helps to properly guide the bait and feel often very delicate bites. For such rods, a reel in size 2000-3000 with a precise brake is recommended. Braided line in size +0.2-0.4PE = 0.06-0.08mm or monofilament line with a diameter of 0.12-0.16mm of good quality. With such a set, we can freely fish for most species of fish. When fishing for larger fish, the gear requires modification and adaptation to specific conditions.

FISHERIES

rivers, lakes, ponds, artificial water reservoirs, canals.

SCENT

Cheese – works perfectly in standing waters such as commercial ponds Trout Area and medium-sized rivers when fishing for whitefish.

Krill – recommended mainly for fishing for wild fish in large rivers and for predators such as perch, zander in dam reservoirs, lakes.

Garlic – used mainly when fishing for fish with a calm feeding behavior, so-called whitefish, and rainbow trout in commercial ponds.

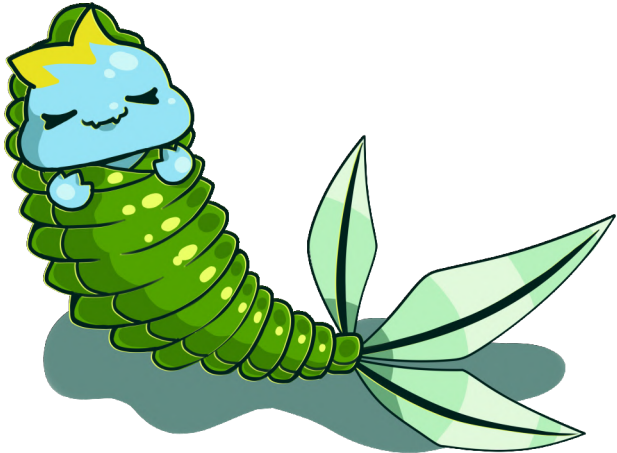

Unscented - for those with a sensitive sense of smell.

TURBO WORM MINI

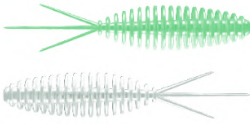

TURBO WORM MINI – The compact yet ribbed body of the Turbo Worm ensures that this seemingly simple lure has an incredibly strong impact on fish. This lure generates a powerful hydroacoustic wave and, due to its large surface area, is a very strong carrier of scents. The "mini" version is 35mm, and we must honestly admit that it is our pride, as it is a small technological masterpiece. Creating such a small yet structurally complex lure was no easy task, but these are the kinds of challenges we love! The Turbo Worm Mini was designed with fishing in small rivers and streams in mind, as well as during increasingly frequent low-water conditions. Like every lure in the "Trout Series," the Turbo Worm Mini is made from our proprietary floating blend and is available in 20 color variants and 4 scent versions.

Garlic – used mainly when fishing for fish with a calm feeding behavior, so-called whitefish, and rainbow trout in commercial ponds.

Unscented - for those with a sensitive sense of smell.

TURBO WORM

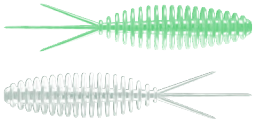

TURBO WORM – because we are anglers and competitors ourselves, we respond to the real needs of our fellow fishermen. Reacting to your feedback and suggestions, we specifically created a design based on a ribbed body. This is how the TURBO WORM came to life, satisfying the needs of all anglers, especially those targeting rainbow trout and perch. Our highly buoyant, floating material combined with the ribbed body, jokingly referred to by some as a "radiator," resulted in a highly mobile and fish-attractive lure. Our killer measures 56mm and is topped with three subtle legs, which not only emit additional enticing movement but also serve as an anti-s snag feature.

DYING WORM

DYING WORM – our interpretation of an earthworm that has found its way into the water, and its presence will undoubtedly be effectively exploited by any predator that spots it. The DYING WORM comes in two sizes: 70mm and 80mm. Armed with a hook that doesn't extend too far beyond the "saddle," it will be an incredibly mobile and attractive lure for fish. Even the slightest movement of the water or the gentlest touch of the rod tip will make our lure begin its enticing dance. It performs exceptionally well when fishing with the current or across the flow. Its attractive action makes it an excellent choice for inactive and apathetic fish, which are effectively invigorated by the undulating movement of the DYING WORM.

Unscented - for those with a sensitive sense of smell.

FLEX WORM

FLEX WORM – there are those who claim that there is no better lure for uncooperative, sluggish fish. And you know what? It's hard for us to disagree with that statement. We designed the FLEX WORM to provide maximum mobility while allowing for the most lethargic retrieval possible. The lure comes in two sizes: 65mm and 95mm. The FLEX WORM is a coiled imitation of an earthworm that straightens out and coils back up with even the gentlest movement of the rod tip. It can be naturally drifted and subtly animated, provoking apathetic fish to strike. It performs exceptionally well during spring floods when cold meltwater discourages fish from biting, while also carrying plenty of earthworms washed out from the soil. Thanks to its innovative construction and tail shape, the FLEX WORM is very simple, almost intuitive to use, and its application is highly versatile, but above all, downright effortless.

WATER
LOVES

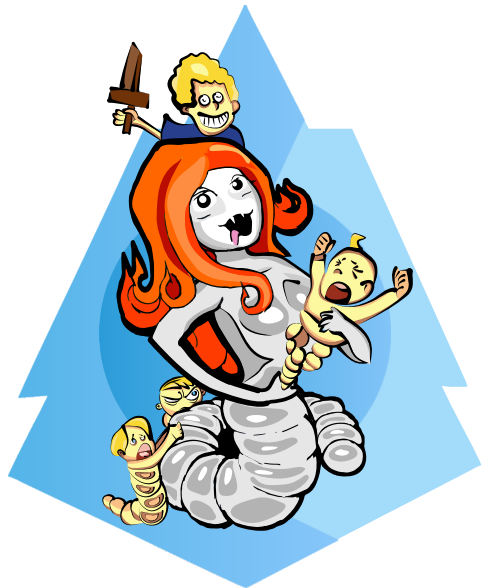

LARVA MULTI

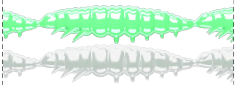

LARVA MULTI – An unconventional yet highly practical and, due to its design, incredibly versatile lure that we created by combining five tiny 25mm LARVAs. By delivering a whole "wreath" of worms to you, we leave it up to you to decide which lure you currently need. A single, tiny LARVA will undoubtedly win the hearts of coarse anglers. A double LARVA is a true killer for trout. Slim, small, yet mobile and highly responsive to even the gentlest movement of water or the rod tip. If you need a more eye-catching and buoyant lure, attach a chain of 3 worms. Have fun!

With such a set we can easily catch most species of fish. When fishing for larger fish, the set needs to be modified and adjusted to the specific conditions.

FISHERIES

rivers, lakes, ponds, artificial water reservoirs, canals.

SCENT

Cheese – works perfectly in standing waters such as commercial ponds Trout Area and medium-sized rivers when fishing for whitefish.

Krill – recommended mainly for fishing for wild fish in large rivers and for predators such as perch, zander in dam reservoirs, lakes.

Garlic – used mainly when fishing for fish with a calm feeding behavior, so-called whitefish, and rainbow trout in commercial ponds.

Unscented – for people with a strong sense of smell.

SLIGHT WORM

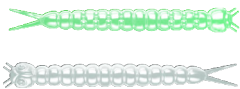

SLIGHT WORM – at first glance, it may seem like an unassuming imitation of a small worm. It may only come in one size (38mm). However, when properly rigged, it becomes a "dark horse" on many overfished waters subjected to heavy angling pressure. Many of our fellow anglers report that the SLIGHT WORM is the best "worm-shaped" lure for small streams, where maximum realism and finesse are key. No fish will swim past the SLIGHT WORM indifferently, and no fan of spin fishing for coarse fish will remain unimpressed.

With such a set we can easily catch most species of fish. When fishing for larger fish, the set needs to be modified and adjusted to the specific conditions.

SCENT

Cheese – works perfectly in standing waters such as commercial ponds Trout Area and medium-sized rivers when fishing for whitefish.

Krill – recommended mainly for fishing for wild fish in large rivers and for predators such as perch, zander in dam reservoirs, lakes.

Garlic – used mainly when fishing for fish with a calm feeding behavior, so-called whitefish, and rainbow trout in commercial ponds.

Unscented – for people with a strong sense of smell.

PRO NYMPH

PRO NYMPH – our smallest (18mm) yet most complexly designed lure. Anyone who sees it usually first grabs their head in disbelief at how so many visible details can be packed into such a tiny lure. The next positive shock for anglers is always what this little wonder can do underwater. The nymph is the perfect lure for subtly tempting cautious fish, not only predators but also coarse fish, so eagerly pursued by XUL enthusiasts. The PRO NYMPH performs exceptionally well during natural, current-paced free drifting, where the flowing water moves the faithfully replicated body elements and antennae, with thickened ends that significantly aid in this task. A very slow descent is also highly effective, especially near underwater obstacles that serve as both hiding spots and feeding grounds for many fish species. A nymph descending right next to an obstacle will certainly not be ignored by any fish!

**hook sizes may vary considerably between different brands.*

FISH

brown trout, rainbow trout, rudd, chub, ide, grayling and whitefish.

TACKLE

an essential element of a properly composed set will be an adequately performing rod, 185-220cm / 1-6g in length, which will not only properly absorb the fish's runs during the fight but will also have the necessary backbone when you hook the fish and help you properly retrieve the lure and feel the often very gentle bites. For such rods a reel in 2000-3000 size with a precise drag is recommended. Braided line of size +0.2-0.5PE - 0.04-0.08mm or 0.10-0.16mm diameter monofilament of high quality. With such a set we can easily catch most species of fish. When fishing for larger fish, the set needs to be modified and adjusted to the specific conditions.

FISHERIES

rivers, lakes, ponds, artificial reservoirs water, canals.

SCENT

Cheese – works perfectly in standing waters such as commercial ponds Trout Area and medium-sized rivers when fishing for whitefish.

Krill – recommended mainly for fishing for wild fish in large rivers and for predators such as perch, zander in dam reservoirs, lakes.

Garlic – used mainly when fishing for fish with a calm feeding behavior, so-called whitefish, and rainbow trout in commercial ponds.

Unscented – for people with a strong sense of smell.

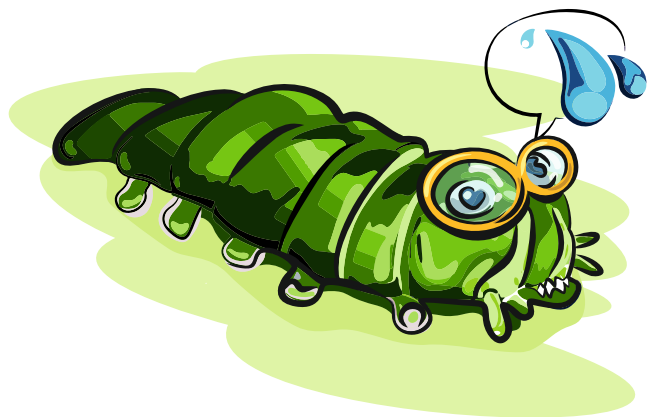

KUKOLKA

KUKOLKA – for many excellent rainbow trout anglers on "Trout Area" waters, this is the go-to weapon. Its unique shape allows our KUKOLKA to be effectively fished using practically all possible techniques, making it an immensely versatile and all-around lure. It is devilishly effective both during a completely natural presentation and during the increasingly popular aggressive twitching. The Kukolka stands out clearly from other lures due to its shape and its fairly significant size variation – 27mm and 42mm. Its characteristic, strongly defined structure, with prominent rings and segments, immediately catches the attention of fish. This is particularly important on commercial waters under heavy fishing pressure and on waters with low clarity, where the key to success is a lure that stands out in shape, color, and the hydroacoustic wave it generates. We especially recommend it to rainbow trout enthusiasts, as well as chub and brook trout anglers, particularly during rising water levels.

LARGO XXL

NEW

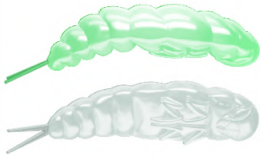

LARGO XXL – The Largo is a lure known to every angler targeting rainbow trout, brook trout, and chub. Plump, buoyant, extremely soft, and tasty. We proudly present the new generation of this iconic lure. Specifically for you, we've created a full 5 cm of a plump pupa, complete with two spines on its abdomen that add extra enticing vibrations. The imitation of a large, high-calorie morsel is a highly attractive prey for many predatory and coarse fish, especially during colder seasons when sluggish fish must carefully calculate every calorie spent on feeding. The Largo XXL is also an excellent weapon on Trout Area waters, where a large lure guarantees both great casting distance and essential buoyancy. Like every lure in the Trout Series line, the Largo XXL is offered in 20 well-known, fish-catching colors, as well as with garlic, krill, cheese scents, and a no-scent version.

FISH

brook trout, rainbow trout, chub, zander, perch.

TACKLE

An essential element of a well-matched set is a properly functioning rod with a length of 185-220cm / 1-6g, which not only provides good shock absorption during the fight but also has the right speed when setting the hook and helps to properly guide the bait and feel often very delicate bites. For such rods, a reel in size 2000-3000 with a precise brake is recommended. Braided line in size +0.2-0.4PE = 0.06-0.08mm or monofilament line with a diameter of 0.12-0.16mm of good quality. With such a set, we can freely fish for most species of fish. When fishing for larger fish, the gear requires modification and adaptation to specific conditions.

FISHERIES

rivers, lakes, ponds, artificial water reservoirs, canals.

SCENT

Cheese – works perfectly in standing waters such as commercial ponds Trout Area and medium-sized rivers when fishing for whitefish.

Krill – recommended mainly for fishing for wild fish in large rivers and for predators such as perch, zander in dam reservoirs, lakes.

Garlic – used mainly when fishing for fish with a calm feeding behavior, so-called whitefish, and rainbow trout in commercial ponds.

Unscented – for people with a strong sense of smell.

LARGO

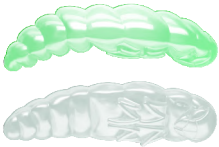

LARGO – one of our flagship lures. A meticulously, almost perfectly crafted imitation of an insect pupa, which in nature forms the basis of the diet not only for trout but also practically all other fish species. It is characterized by excellent effectiveness in both open waters and “Trout Area” fisheries when targeting rainbow trout. To ensure you can perfectly adapt to your fishing grounds, our LARGO comes in sizes of 30 mm and 35 mm. It is a tempting, plump morsel that no fish will swim past indifferently.

Garlic – used mainly when fishing for fish with a calm feeding behavior, so-called whitefish, and rainbow trout in commercial ponds.

Unscented – for people with a strong sense of smell.

LARGO SLIM

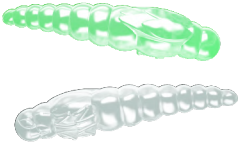

LARGO SLIM – a slightly smaller (28mm and 34mm) version of our LARGO. As the name suggests, this variation of our insect pupa has been specially "slimmed down," making it the perfect weapon for provoking cautious fish, especially on overfished waters under heavy pressure, where our potential targets have already seen plenty of lures. It is also an ideal lure for summer low-water conditions on small rivers and streams, where the LARGO SLIM, armed with a small hook and a light jig head, becomes the perfect tool for tempting exceptionally wary fish.

PELAGIC/VERTICAL SERIES

Technological progress has not bypassed fishing, and it often seems that it is even a driving force behind the introduction of increasingly innovative solutions. The progress we are experiencing in the equipment segment is also clearly visible in the realm of fishing electronics. Better fish finders, advanced transducers, and imaging systems have opened up entirely new perspectives for anglers. Of course, every technology must first be learned, and above all, used wisely and with the well-being of our fishing grounds in mind. Thanks to advanced electronics, many anglers have started fishing both vertically and in the water column, reaching for previously almost inaccessible catches. Since we also keep up with the times, we present to you four specially designed lures that will work exceptionally well in these types of fishing methods. Each lure is packaged separately, comes in one size variant, and in twelve color options. You will find both natural colors, faithfully reflecting the hues of the originals, as well as imaginative colors. Importantly, when designing the colors, we also took into account parameters such as the visibility of a given color at great depths, which is of significant importance during vertical fishing. The sizes of our lures are the result of numerous trials and experiences, as well as a compromise between presentation comfort and faithful imitation of the prey most favored by predators. The size range varies from 17 to 21 centimeters, making it a target for relatively small fish as well as a tempting morsel for the largest specimens. As with our other lures, here you will also find our recommended rigging systems. These will allow you to present our lures faithfully and naturally, while achieving high hooking efficiency, which we sincerely wish you!

PELAGIC/VERTICAL SERIES

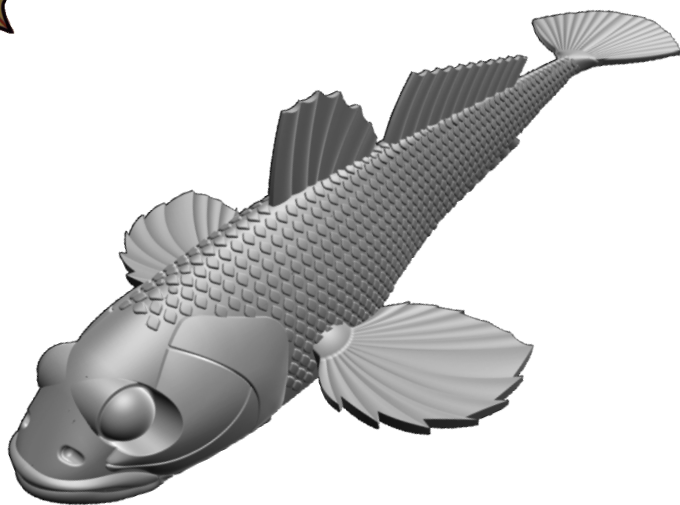

GOBIO

NEW

GOBIO - a faithful representation of a real goby. This is not your classic "swimbait"... Throw it into the water, and you'll see the hypnotic action it achieves thanks to the finest details. Each fin generates a hydroacoustic wave that is picked up by the senses of predators. GOBIO is a lure currently available in one size, which we believe is optimal and thoroughly tested by us. In the package, you will find one scent-free soft bait measuring 7.3 inches (186 mm) in length and weighing 40 grams. Even a smaller zander won't turn its nose up at this treat, while it also serves as an attractive catch for trophy-sized specimens.

TACKLE

We match the bait and the type and size of the fish we want to catch depending on the technique we want to use. As a standard, a universal setup for vertical fishing can include a casting or spinning rod with a length of 140-185 cm when fishing from a boat, with a casting weight of 30-80 g, suitable for fishing in waters where the depth does not exceed 20 m. For greater depths, such as in sea fishing, it is recommended to choose equipment that allows for heavier rigging and a rod with a casting weight that meets our expectations for presenting the bait. A reel in size 4000 or a multiplier in size 201-301 + braided line 0.12-0.18 mm, and a fluorocarbon leader 0.40-0.60 mm or 0.90 mm, which is safe for pike fishing. The leader can also be made of tungsten or steel.

FISH

Zander, pike, catfish, huchen + marine fish.

FISHERIES

All fishing grounds with the above-mentioned species, including sea fishing.

FROG - TADPOLE TAIL

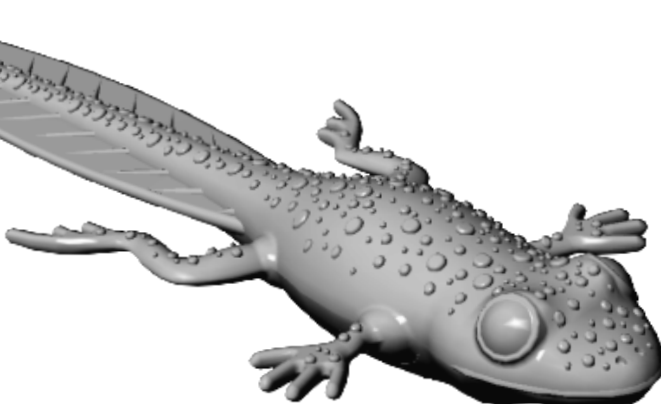

NEW

FROG - TADPOLE TAIL - is another member of the Pelagic/Vertical series. "Tadpole," in Shakespeare's language, means a young frog. Our version of the tadpole is 21 cm long. It consists of a "frog-like" body, which, as always with Libra Lures, is very faithfully replicated, with the smallest details preserved, such as large eyes, dorsal protrusions, and even legs, which also serve as additional attracting elements. The body of our tadpole is flattened, resembling an adult frog, meaning our larva is in the final stage of transformation into an adult amphibian. The shape of our lure is the result of numerous tests and prototypes to ensure maximum effectiveness during presentation. The long, soft tail seems to have a life of its own. The slightest movement of water or the rod tip sets it into intense, fluid undulations, which have a hypnotic effect on pike, as well as zander and catfish. The movements of the legs, which energetically respond to the rod's action, complete the picture. Remember not to "over-stiffen" our tadpole. Give it freedom, and it will surely reward you! Frog – Tadpole Tail, like all our lures, comes in both natural and imaginative colors, allowing you to adapt to any conditions and the current preferences of predators.

TACKLE

We select the bait based on the technique we want to use, as well as the species and size of the fish we aim to catch.

As a standard, a universal setup for vertical fishing can include a casting or spinning rod with a length of 140-185 cm when fishing from a boat, with a casting weight of 30-80 g, suitable for fishing in waters where the depth does not exceed 20 m. For greater depths, such as in sea fishing, it is recommended to choose equipment that allows for heavier rigging and a rod with a casting weight that meets our expectations for presenting the bait. A reel in size 4000 or a multiplier in size 201-301, paired with braided line of 0.12-0.18 mm and a fluorocarbon leader of 0.40-0.60 mm or 0.90 mm, which is safe for pike fishing. The leader can also be made of tungsten or steel.

FISH

Zander, pike, catfish + marine fish.

FISHERIES

All fishing grounds with the species mentioned above, including sea fishing.

BLEAK - SLUG TAIL

NEW

BLEAK - SLUG TAIL - another member of the Pelagic/Vertical Series. As the name suggests, this lure features a body modeled on a 3D scan of a live bleak, strikingly resembling a real fish. The lure is 8.2 inches (21 cm) long. However, it appears much more delicate, as the flattened body, containing even the smallest details like scales, fins, and gill covers, transitions into a narrow, slender tail with a spindle shape (slug tail). This design ensures the body's action as well as subtle vibrations of the tail section, which responds to the slightest movement of the rod tip or water ripples. Even when seemingly held still, the lure will continue to tempt the most finicky predators. This is a secret weapon you must try when zander are being picky and refuse to attack other lures. Work the Slug Tail gently, and you'll see for yourself its incredible effectiveness!

DEAD FISH

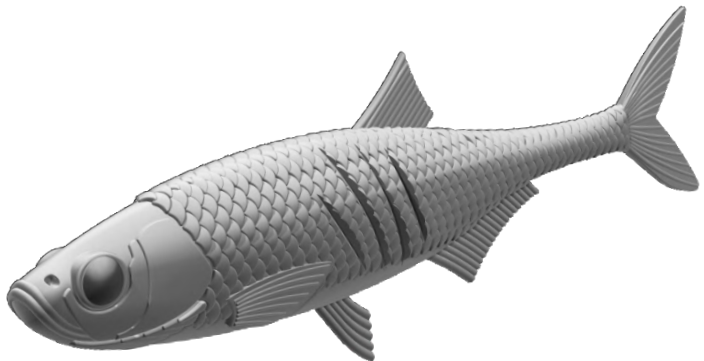

NEW

Dead Fish - Our Dead Fish is still alive. But not for long. Taking its last breaths, it still tries to fight for survival. It's already lying on its side, but it keeps attempting to push itself up. It nervously jerks to the sides, thrashes its tail one last time, and then freezes motionless. It's the perfect prey for a predator hunting for relatively easy targets. Dead Fish is 6.7 inches (17 cm) long. To start, we're offering 5 effective colors, including those that faithfully mimic the natural coloring of whitefish, as well as aggressive colors that act on predators like a red flag to a bull. Each piece also features "wounds" in red, which serve as an additional attracting element and a potential point of attack. Remember to place the Dead Fish on its side before rigging to unlock all its hidden potential!

BASS SERIES

The "Bass Series" is our response to market demand and the growing popularity of new bait rigging techniques that have come to us from across the ocean. Systems such as the Texas Rig, Carolina Rig, Wacky Rig, and Jig Rig have started to be used by an increasing number of anglers, and many of these techniques yield much better results when paired with specially designed baits. Our "Bass" series features four variations of worms, or "worm-shaped" baits, which differ significantly in their parameters and presentation capabilities. Of course, each of these baits can be presented on a classic jig head, but remember to ensure that the hook does not have too long of a shank, as this could stiffen the bait. After the debut of the "Bass Series," it quickly became clear that local predators responded exceptionally well to our lures. These baits feature new, intriguing, and previously unknown shapes, actions, and hydroacoustic waves to our fish. This has led to significant interest from species like zander, perch, and pike. It turned out that many fishing spots, previously under heavy angling pressure, "reopened" after the introduction of the Bass Worm. A common feature of all the lures in the "Bass Series" is the unique blend they are made from. This exceptionally soft material ensures a natural, enticing action even with the most delicate presentations. Additionally, the material is salt-based, which has been proven multiple times to increase the lure's attractiveness to predators. Furthermore, each bait is infused with a perfectly replicated krill aroma, which bottom-feeding predators respond to exceptionally well. The "Bass Series" offers 12 fishing colors, including versions with black and colored glitter. See for yourself the fantastic results they bring to our local fishing spots!

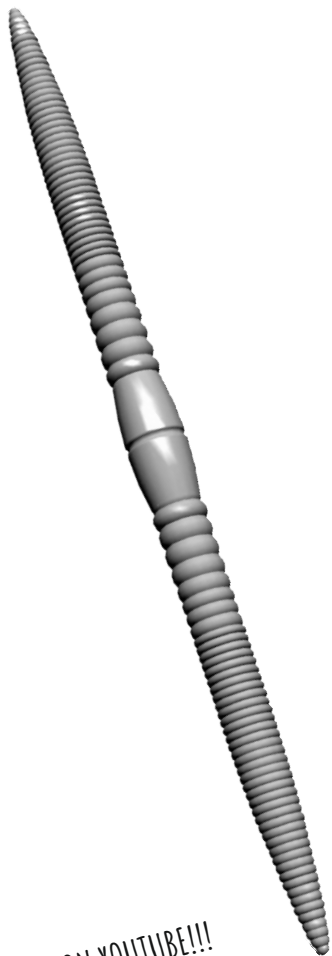

BASS SERIES

LIBRA
LURES

BASS FAT BOY WACKY WORM

Bass Fat Boy Wacky Worm 128mm / 5" - as the name suggests, this lure has been designed for the most popular rigging system in bass fishing, the Wacky Rig. Its unusual shape, which attracts the attention of fish even more than standard lures, and a specially designed slot for the rubber band will allow us to present the lure with finesse and effectively catch even the most cautious fish and effectively catch even very cautious and inactive fish. The material used for the BASS series lures has been made stronger, which ensures greater durability of the lure and a lifelike action of the lure underwater. Not only bass are fished with this type of lure, it is a very effective lure in the drop shot method when fishing for zander.

MODEL	LENGTH (mm)	WEIGH (g/pcs)	QUANTITY PER PACKAGE (pcs)	SCENT
BASS FAT BOY WACKY WORM	128	4,30	8	KRILL

The BASS range of baits is based on a new blend called "Salt Worm Project". It has been designed with a salt base that contributes to the appetising and aroma of the krill.

The material is very soft and strong, providing a lifelike action to the lure, created for finesse presentations to fool the most difficult to catch fish.

FISH: bass, zander, perch, huchen, sea trout, salmon, brown trout, rainbow trout.

FISHERIES: rivers, lakes, ponds, artificial reservoirs water, canals.

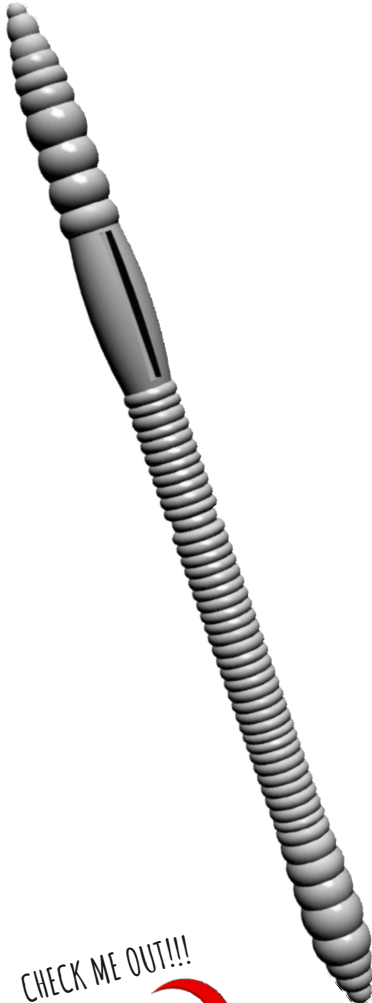

TACKLE: we choose depending of the technique we want to present the lure with and the species of fish we want to catch. The basic tackle recommended when fishing for bass is a casting or spinning rod 210-240 cm long with a casting weight of up to 21-35 g, which will bent properly but will also be fast enough. A delicate, subtle tip with which we can finesse fish will help us to present the lure effectively and naturally underwater and provoke wary bass to attack. When fishing with soft lures and the contact of the lure with the bottom, we use reels or multipliers with a large gear ratio. This allows us to quickly reduce excess line and not miss delicate bites when presenting and guiding the line. Another important element is the main line. It is recommended to use fluorocarbon with a maximum strength of 9 kg for soft lures because of its parameters. It has much higher abrasion resistance and does not absorb water like monofilament. Another advantage is its low stretch and optical density, which makes it much harder to see under water.

SCENT:

Krill - recommended mainly for fishing wild fish in large rivers and fishing for predators such as perch, zander in dammed reservoirs, lakes.

BASS FAT STICK WORM

BASS FAT STICK WORM 128 mm / 5" - a lure that allows you to catch virtually any species of predatory fish as well as large silver fish. Primarily oriented towards bass fishing, but no fish will pass it by indifferently!

It is perfect in the pursuit of record-breaking trout - as the bigger and thicker brother of the Dying Worm, it is also suitable for the sbiriluno method in sea trout fishing.

MODEL	LENGTH (mm)	WEIGH (g/pcs)	QUANTITY PER PACKAGE (pcs)	SCENT
BASS FAT STICK WORM	128	4,95	8	KRILL

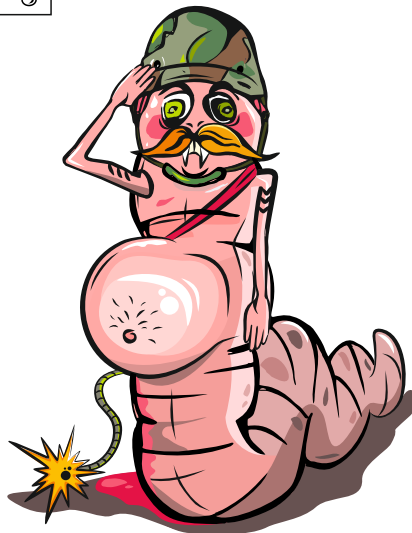

The BASS range of baits is based on a new blend called "Salt Worm Project". It has been designed with a salt base that contributes to the appetising and aroma of the krill.

BASS SLIM FINNESE WORM

BASS SLIM FINNESE WORM 140 mm / 5,5" - there may not be an ideal worm but the Slim Finnese is damn close! Slightly longer and a bit skinnier in diameter than the Stick Worm, created mainly for the drop shot technique, it allows for perfect animation of the lure during its retrieve - presentation. The slightest twitch of the rod tip sets in motion not only its flat tail but also the entire body. It does not deviate much from a natural worm that has dropped into the water.

MODEL	LENGTH (mm)	WEIGH (g/pcs)	QUANTITY PER PACKAGE (pcs)	SCENT

A delicate, subtle tip with which we can finesse fish will help us to present the lure effectively and naturally underwater and provoke wary bass to attack. When fishing with soft lures and the contact of the lure with the bottom, we use reels or multipliers with a large gear ratio. This allows us to quickly reduce excess line and not miss delicate bites when presenting and guiding the line. Another important element is the main line. It is recommended to use fluorocarbon with a maximum strength of 9 kg for soft lures because of its parameters. It has much higher abrasion resistance and does not absorb water like monofilament. Another advantage is its low stretch and optical density, which makes it much harder to see under water.

SCENT:

Krill - recommended mainly for fishing wild fish in large rivers and fishing for predators such as perch, zander in dammed reservoirs, lakes.

BASS CRAZY TWIST TAIL WORM

BASS CRAZY TWIST TAIL WORM 140 mm / 5,5" - an excellent lure for the carolina rig and texas rig method, as well as for the classic jig head. Its shape and action allow effective fishing for bass, zander and pike in technically difficult fisheries among branches, weeds and bushes. Properly rigged and presented in the right place, it can often turn out to be the lure of last resort! Wide variety of colours allows to suit the species of predator and the conditions on the water.

MODEL	LENGTH (mm)	WEIGH (g/pcs)	QUANTITY PER PACKAGE (pcs)	SCENT
BASS CRAZY TWIST TAIL WORM	148	6,80	8	KRILL

The BASS range of baits is based on a new blend called "Salt Worm Project". It has been designed with a salt base that contributes to the appetising and aroma of the krill.

The material is very soft and strong, providing a lifelike action to the lure, created for finesse presentations to fool the most difficult to catch fish.

BASS CRAZY TWIST TAIL WORM

BASS CRAZY TWIST TAIL WORM 140 (5,5")

CLASSICAL JIG HEAD

- Bass Crazy Twist Tail Worm 140 - jig head hook #3/0, weight 3 - 15g.

JIG HEAD - OFFSET HOOK

- Bass Crazy Twist Tail Worm 140 - jig head offset hook #2/0 - 4/0, weight 3 - 15g.

CHEBURASHKA - STRAIGHT HOOK / CLASSIC

- Bass Crazy Twist Tail Worm 140 - straight hook with large eye in size #2/0 - 3/0, cheburashka weight 3 - 20g.

CHEBURASHKA - OFFSET HOOK

- Bass Crazy Twist Tail Worm 140 - offset hook with large eye in size #4/0, cheburashka weight 3 - 20g.

JIG RIG - STRAIGHT HOOK / CLASSIC

- Bass Crazy Twist Tail Worm 140 - straight hook with large eye in size #2/0, weight 5 - 15g.

JIG RIG - OFFSET HOOK

- Bass Crazy Twist Tail Worm 140 - offset hook with large eye in size #2/0 - 4/0, weight 5 - 15g.

CAROLINA RIG

- Bass Crazy Twist Tail Worm 140 - offset hook with large eye in size #2/0 - 4/0, bullet weight 5 - 20g.

TEXAS RIG

- Bass Crazy Twist Tail Worm 140 - offset hook with large eye in size #2/0 - 4/0, bullet weight 5 - 20g.

WACKY RIG

- Bass Crazy Twist Tail Worm 140 - drop shot/wacky hook #1/0 - 2, rubber oring.

NED RIG

- Bass Crazy Twist Tail Worm 140 - ned rig hook #2/0 - 3/0, weight 5 - 15g.

NEKO RIG

- Bass Crazy Twist Tail Worm 140 - drop shot/wacky hook #1/0 - 2, tungsten screw weights, rubber oring.

DROP SHOT

- Bass Crazy Twist Tail Worm 140 - drop shot hook #1/0 - 2, drop shot screw weights 10-50g.

TOKYO RIG

- Bass Crazy Twist Tail Worm 140 - offset hook with large eye in size #2/0 - 4/0, bullet weight 5 - 30g.

SBIRULINO

- Bass Crazy Twist Tail Worm 140 - straight / offset hook with large eye size #3/0.

SIDE STRAP

- Bass Crazy Twist Tail Worm 140 - straight / offset hook with large eye size #2/0.

*hook sizes may vary considerably between different brands.

FISH: bass, zander, perch, huchen, sea trout, salmon, brown trout, rainbow trout.

FISHERIES: rivers, lakes, ponds, artificial reservoirs water, canals.

TACKLE: we choose depending of the technique we want to present the lure with and the species of fish we want to catch. The basic tackle recommended when fishing for bass is a casting or spinning rod 210-240 cm long with a casting weight of up to 21-35 g, which will bent properly but will also be fast enough. A delicate, subtle tip with which we can finesse fish will help us to present the lure effectively and naturally underwater and provoke wary bass to attack. When fishing with soft lures and the contact of the lure with the bottom, we use reels or multipliers with a large gear ratio. This allows us to quickly reduce excess line and not miss delicate bites when presenting and guiding the line. Another important element is the main line. It is recommended to use fluorocarbon with a maximum strength of 9 kg for soft lures because of its parameters. It has much higher abrasion resistance and does not absorb water like monofilament. Another advantage is its low stretch and optical density, which makes it much harder to see under water.

SCENT:

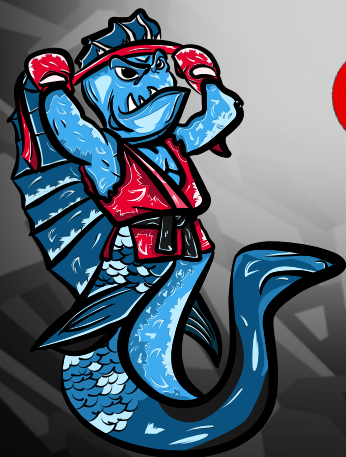

Krill - recommended mainly for fishing wild fish in large rivers and fishing for predators such as perch, zander in dammed reservoirs, lakes.

PREDATOR SERIES

Although we love fishing for trout and started producing our lures with these beautiful fish in mind, we certainly haven't forgotten about other predatory fish. It's true that at one point, trout competitions completely absorbed us. However, like probably every angler, we began our fishing adventure with other species. For many years, we honed our fishing skills by pursuing perch, pike, zander, as well as catfish and asp, both in rivers and still waters. Finally, having the technical and production capabilities, we couldn't wait to bring our ideas and lure patents to life, especially for these most popular predators. The Predator Series, for now, consists of three distinct lures – two with a "shad" tail and one with a "twist" tail, but also based on a "fish-like" body. To meet the needs of all anglers, we offer a very wide range of sizes. You'll find delicate lures starting from just 4.5 cm in length, up to 20-centimeter "cutlets" for pike fishing enthusiasts. We offer smaller lures in nine very effective colors. Additionally, the material they are made from is infused with an enticing fish aroma. The larger versions of our "Predators" come in 12 attractive colors, including painted ones. The lures in this series can be rigged in many different ways, which we also present to you – from classic jig heads, through cheburashka or offset hooks, to rigs with screws and anchor systems. Depending on the model, size, and rigging method, we can target any predator found in domestic and not only fishing spots. The multitude of color solutions, action characteristics, and presentation options give the angler a huge range of choices that will surely tempt more than one "personal best".

PREDATOR SERIES

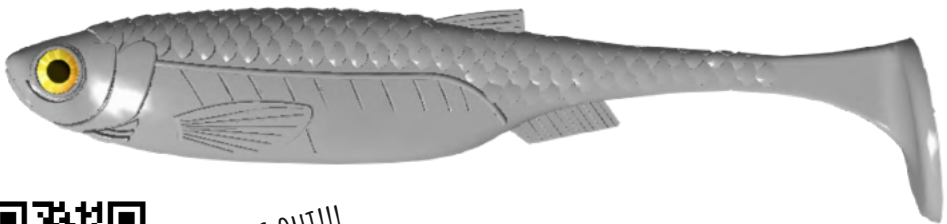

KRAKEN SHAD

NEW

Kraken Shad – Just like the legendary Kraken, which spared no ship sailing through the Strait of Gibraltar, our Kraken Shad won't let any predator swim past. A sleek ripper with a body shape resembling a bleak, dace, or another tasty morsel, topped with a wide tail paddle. Since we've accustomed you to the attention to detail in our lures, here too, nuances couldn't be missing – scales, fins, and a large eye that serves as an excellent target. The subtle shimmering of the body combined with the tail's action creates a combination that zander and perch absolutely adore. But we are convinced that the Kraken will win the hearts of not only "cloudy-eyed" hunters, as it is designed to catch literally all predators, not just domestic ones. It will be available in a wide, attractive color range and six size variants, ranging from 2 to 8 inches, or 5 to 20 cm.

TACKLE

We choose it depending on the technique we want to use to present the lure, as well as the species and size of fish we want to catch:

LURES 1.75" - 3" - A spinning or casting rod with a length of 180-213cm when fishing from a boat, or longer when fishing from the shore, with a realistic casting weight of up to 15g, for finesse fishing in water bodies where the depth does not exceed 5-7m. For greater depths or when using jig heads heavier than 10g, it is recommended to choose a rod with a casting weight that meets our expectations for lure presentation. A reel in the size 2000-3000, braided line 0.04-0.08mm, and a fluorocarbon or monofilament leader of 0.12-0.14mm, or a delicate and subtle tungsten leader up to 5kg.

LURES 4" - 6" - A spinning or casting rod with a length of 180-213cm when fishing from a boat, or longer when fishing from the shore, with a realistic casting weight of up to 35g. This will be a highly versatile rod that allows us to fish using various techniques and in different water bodies. A reel in the size 3000-4000, braided line 0.10-0.16mm, and a fluorocarbon leader of 0.30-0.45mm, or a steel/tungsten leader with a strength of up to 12kg.

LURES 7" - 8" - A spinning or casting rod with a length of 198-240cm and a realistic casting weight of up to 80-130g, depending on the size of the weights used on the lures and the depth of lure presentation. A reel in the size 4000-5000, braided line 0.18-0.23mm, which will allow for a safe and short fight with the fish, and a fluorocarbon leader of 0.9mm - a safe diameter that is resistant to the sharp teeth of pike.

FISH

perch, zander, pike, chub, ide, barbel, asp, brook trout, catfish, whitefish.

FISHERIES

lakes, ponds, artificial water reservoirs such as Trout Areas, rivers, canals.

SCENT

FISH - a very high-quality, intense, natural scent that effectively attracts predators. Thanks to it, you can achieve satisfying results, especially when fishing for perch.

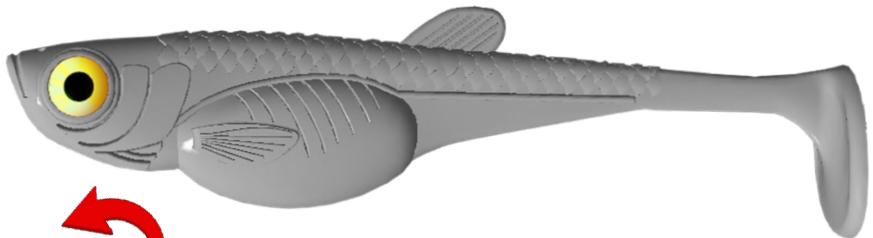

EMBRION SHAD

NEW

Embrion Shad – a special project that kept us awake at night for many nights. Fortunately, perseverance in the pursuit of perfection, experience, and the method of numerous trials and corrections paid off. We have created a lure refined to the smallest detail, which performs excellently both during the most popular fishing method, i.e., the drop-shot technique, as well as during the heart-pounding mid-water fishing. The unique color scheme will certainly be appreciated by pike anglers. Embrion Shad features a body with a pronounced, almost bulging abdominal section. This shift in the center of gravity guarantees unconventional, enticing action. The finishing touch is the narrowing of the tail section before the wide paddle tail. Embrion Shad is available in six size variants, ranging from 2 to 8 inches, or 5 to 20 cm.

SCENT

FISH - a very high-quality, intense, natural scent that effectively attracts predators. Thanks to it, you can achieve satisfying results, especially when fishing for perch.

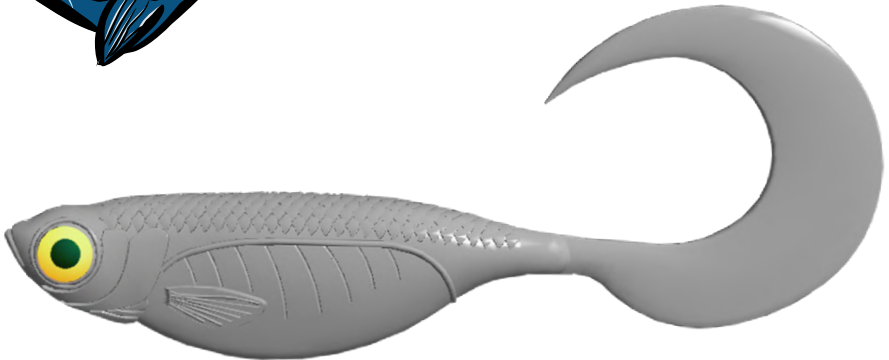

EMBRION TWIST TAIL

NEW

Embrion Twist Tail – our take on the popular twister. We combined a large, wide-waving, meaty tail with the bulging body of the Embrion Shad. This resulted in a lure with action in both the body and the tail section, right from the start and at the slowest retrieve. Special shading of the tail section ensures the generation of a hydroacoustic wave in any conditions and provokes even the most sluggish and finicky fish to strike. We are convinced that the smallest sizes will be a sure bet for trout and perch anglers. Embrion Twist Tail is available in four sizes, from 1.75" to 7", or from 4.5cm to 18cm.

– Hook size #6/0 + treble hook #1-1/0, sinker weight 10-35g

**hook sizes may vary considerably between different brands.*

TACKLE

We choose it depending on the technique we want to use to present the lure, as well as the species and size of fish we want to catch:

LURES 1.75"- 3" – A spinning or casting rod with a length of 180-213cm when fishing from a boat, or longer when fishing from the shore, with a realistic casting weight of up to 15g, for finesse fishing in water bodies where the depth does not exceed 5-7m. For greater depths or when using jig heads heavier than 10g, it is recommended to choose a rod with a casting weight that meets our expectations for lure presentation. A reel in the size 2000-3000, braided line 0.04-0.08mm, and a fluorocarbon or monofilament leader of 0.12-0.14mm, or a delicate and subtle tungsten leader up to 5kg.

LURES 4"- 6" – A spinning or casting rod with a length of 180-213cm when fishing from a boat, or longer when fishing from the shore, with a realistic casting weight of up to 35g. This will be a highly versatile rod that allows us to fish using various techniques and in different water bodies. A reel in the size 3000-4000, braided line 0.10-0.16mm, and a fluorocarbon leader of 0.30-0.45mm, or a steel/tungsten leader with a strength of up to 12kg.

LURES 7"- 8" – A spinning or casting rod with a length of 198-240cm and a realistic casting weight of up to 80-130g, depending on the size of the weights used on the lures and the depth of lure presentation. A reel in the size 4000-5000, braided line 0.18-0.23mm, which will allow for a safe and short fight with the fish, and a fluorocarbon leader of 0.9mm – a safe diameter that is resistant to the sharp teeth of pike.

FISH

perch, zander, pike, chub, ide, barbel, asp, brook trout, catfish, whitefish.

FISHERIES

lakes, ponds, artificial water reservoirs such as Trout Areas, rivers, canals.

SCENT

FISH - a very high-quality, intense, natural scent that effectively attracts predators. Thanks to it, you can achieve satisfying results, especially when fishing for perch.

POSTAW NA PROFESJONALIZM I CIESZ SIĘ SUKCESEM NAD WODĄ!

Metoda wertykalna w wybranych to technika połowu, która polega na ponieszeniu przynęty bezpośrednio pod łódkę lub w jej bliskim sąsiedztwie, w celu złowienia ryb żerujących przy dnie lub w bliżej wodnej. Jest to szczególnie skuteczna metoda w przypadku łowienia drapieżników, takich jak sandacz, kłuzgoczek czy sum. Istotną kwestią jest precyzyjne opuszczenie przynęty na wybraną głębokość, odczytywanie sygnału kontroli z przynęty, skutkające precyzyjnym poniesieniem rasy, przy minimalnym szarpaniu rurek ryby lub innej zdobyczy.

PEŁEKAROWE GŁOBIENIA

GOBIO - 711 / 110MM / 10g - wieme odzwierciedlenie prawdziwego głowacza. Wzrostło go do wody, a zobaczył, jak horyzontalnie pracuje egzemplarz posiada także żarły w czarnym kolorze, które stanowią dodatkowy element wabliwy, jak i jednocześnie potencjalny punkt ataku. Pamiętaj, by przed zbliżeniem połowić Dead Fish a na bok, by wyłowić z niego wstępną drzemkę w rym modności.

DEAD FISH 177 - 110MM / 7.5g - nasza matryca ryba. To idealna ofiara dla drapieżnika, który poluje na naturalnie najbardziej zdołanych. Każdy egzemplarz posiada także żarły w czarnym kolorze, które stanowią dodatkowy element wabliwy, jak i jednocześnie potencjalny punkt ataku. Pamiętaj, by przed zbliżeniem połowić Dead Fish a na bok, by wyłowić z niego wstępną drzemkę w rym modności.

FROG-TADPOLE TAIL 177 - 110MM / 12.5g - wieme odzwierciedlony korpus żaby, z zachowaniem najważniejszych detali, jak duże oczy, wypustki na grzbiecie, czy także łapki, które również stanowią dodatkowy element wabliwy. Kształt naszyj przynęty to efekt wielu testów i próśń, aby zapewnić maksymalnie skuteczną pracę podczas prezentacji. Długość przynęty maksymalnie skuteczna przy łowieniu sandacza, kłuzgoczka czy też wędkarstwa, wprawia go w zainteresowanie, głęboko falowanie, które doznają węża horyzontalnego na szczytki, ale także sandacza i sumy.

BREAK-SLUG-TAIL 177 - 110MM / 15g - jest to przynęta o korpusie odzwierciedlonym na brygamiarowym skłanie żywej ślimki, ludzkiego przypominającym żywej ryby. Jej spłaszczony korpus zenerujący, najbardziej naturalny kształt, jak kłuzgoczek, galeony czy kłuzgoczek słabowych, przynęta w wąskim, delikatnym ogonie, o wężowatym kształcie (slug tail). Taka konstrukcja zapewnia pracę korpusu, jak i delikatne drganie części ogonowej, która reaguje na najdrobniejszy ruch szczytki, czy falowanie wody.

BLIND BAG LIBRA LURES

MYSTERY PACK OF LURES FOR ANGLERS!

Our Blind Bags are an exciting way to enhance your fishing gear with high-quality lures that will surprise you with their effectiveness!

FOR WHO?

- for anglers who love experimenting with new lures,
- for users of our lures who want to take advantage of promotional prices,
- for fans of specific spinning fishing techniques looking for effective solutions,
- for collectors who want to expand their tackle boxes with unique products,
- for those searching for the perfect gift for an angler!

SIZE 25x35cm

EACH BAG IS A MYSTERY – YOU NEVER KNOW WHICH LURE OR WHICH COLOR WILL END UP IN YOUR HANDS – IT'S AN EXTRA DOSE OF EXCITEMENT!

CONTENTS OF EACH BLIND BAG:

MIX	– no one knows what you'll find inside?!
PELAGIC/VERTICAL SERIES	– Goby 7.3", Frog-Tadpole Tail 8.2", Bleak-Slug Tail 8.2", and Dead Fish 6.7" in carefully selected colors tailored to every condition by the water.
TROUT SERIES	– effective and carefully selected 10 jars chosen by athletes from the national trout fishing team.
PREDATOR SERIES – PERCH	– a perch set of 12 packs featuring our smallest warriors that will help you catch the biggest striped specimens and other species feeding on fry!
PREDATOR SERIES – PIKE-ZANDER	– a universal pike-perch set containing lures ranging in size from 4"/10cm to 8"/20.5cm.
BASS SERIES	– a set of 8 packs selected to deceive the most challenging fish to catch, such as pike-perch, sea trout, pike, large perch, and bass.

**the contents of the Blind Bags may vary.*
